

Enantioselective Total Syntheses of (-)-Caulamidine D and (-)-Isocaulamidine D and Their Absolute Configuration Reassignment
 Haiyong Yu, Junhao Zhang, Dongxu Ma, Xiaotong Li, and Tao Xu*

- First Total Syntheses Completed for Caulamidine D and Isocaulamidine D
- Unified Strategy in 16 Steps
- Absolute Configurations Reassigned
- TFA salts of Natural Sample Deciphered

Key steps include:

- Asymmetric Meerwein-Eschenmoser-Claisen Rearrangement (MECR)
- Amine/Nitrile Cyclization Cascade

derive from a common intermediate through unselective methylation

Scheme 2. Enantioselective Total Syntheses of Caulamidine D (5) and Isocaulamidine D (6)

R₂=oNO₂Ph, oBrPh : no product

Eschenmoser-Claisen rearrangement
